

# BB-150C BULK BAGGER

The BB-150C is designed for use with non-free flowing products such as compost, top soil, mulch and bark. Included is a 'boat' hopper that feeds product to the infeed conveyor using a belt. It includes a screw agitator to ensure product does not compact and undermine or bridge. The infeed directs product to a chute before the FIBC. Product is weighed in the bag on a platform scales. Weights can be modified using the weigh indicator.

Personnel required  
One person operation

## PRODUCT SPECIFICATIONS

Bags per hour	120 Bulk Bags P/hour
Weighing capabilities	Upto 3 ton
Hopper capacity	12m <sup>3</sup>
Power requirements	3 Phase, 80amp
Loading height	3500mm

## Products Packed

Compost, Bark, Topsoil, mulch
