

BB-200 BULK BAGGER

The BB-200 is an FIBC bag filling system designed to accept various products, allowing users more flexibility to utilise the system to bag a broader range of materials.

As standard the system includes a 4m³ hopper, belt conveyor and filling frame. The channelled arms on the bag filling frame are designed to accept 4 looped bulk FIBC's. Once filled the bag can be removed with ease by using a fork lift truck.

Personnel required
One person operation

PRODUCT SPECIFICATIONS

Bags per hour	120 Bulk Bags P/hour
Weighing capabilities	Up to 3 ton
Hopper capacity	4m ³
Power requirements	3 Phase, 32amp
Loading height	3150mm

Products Packed

Aggregates, Wood pellets, Rock Salt, Animal Feed, Coal and more

*Product Dependant

BB-400 BULK BAGGER

The BB-400 is capable of filling 3 bulk bags per minute and able to refill to weightment in just 17 seconds. A large 11m³ hopper feeds onto an in-feed belt conveyor which then feeds the BB-400 bulk bag filling system. The system itself is controlled by an integrated weighing system that fills the weigh pan to a pre-set weightment.

PRODUCT SPECIFICATIONS

Bags per hour	240 Bulk Bags P/hour*
Weighing capabilities	Upto 3 ton
Hopper capacity	11m ³ Rear loading / 10m ³ Side Loading
